

Nationwide Staffing for DB2 Systems Professionals

SPCI is a national high-tech search and consulting firm which specializes exclusively in placing mainframe systems programmers. This of course includes DB2 systems programmers and system-level DBAs with experience in related areas such as:

- DB2 installation and maintenance on multiple platforms.
- Troubleshooting and dump analysis.
- Performance tuning and load testing/balancing.
- Exit coding and control block level product development.
- Interface with CICS and MQSeries.
- Database back-up and recovery.
- Configuration and use of DB2 tools such as Omegamon/DB2 and TMON/DB2.

Here are some of the openings we are currently representing. If you know of anyone potentially interested in one or more of these, please have them contact me at the number or email address below. All of our openings, including the most current ones, can be found at www.SPCI.net.

DB2 Systems Programmer

Life is a Beach. . . or could be

A prominent end user on the eastern seaboard has an immediate need for an experienced DB2 professional to provide systems programming and DBA support for a z/800 processor running z/OS 1.4. This person should have experience with DB2 installation, maintenance and support as well as DB2 logical and physical database design, database monitoring and tuning, backup and recovery, and problem resolution. Knowledge of ADABAS, Natural or PeopleSoft is a plus. Experience with CICS, VTAM and OEM software installation using SMP/E is also desirable since additional responsibilities will include backup systems programming support for z/OS and major subsystems. This is an excellent opportunity to live where you'd like to retire, as the data center is commutable from several Oceanside resort towns. A flexible benefits plan includes individual and family medical, dental and vision coverage; life and disability insurance; and generous 401(k) savings options. Full company-paid relocation. Salary to \$90k. [K47327](#)

CICS/DB2/MQSeries Systems Programmer New England End User

A large New England mainframe shop has an immediate need for a systems programmer with a CICS background and either DB2 or MQSeries. This person will be responsible for installation and maintenance of CICS/TS in a z/OS parallel sysplex environment. They will also assist in supporting DB2, MQSeries and all related products and utilities. Other responsibilities will include troubleshooting, systems/applications tuning, and third party product installs. Salary commensurate with experience. Local candidates preferred. [W88210](#)

COMPUTERS

MVS Generalist with DB2 NW New York State

An extremely stable end user in Northwest NY state has the perfect opportunity for an MVS systems programmer with some DB2 background. All applicants must have five or more years of systems programming experience in an OS/390 or z/OS environment along with some solid exposure to DB2. Similar experience with IMS or CICS is a plus. Good SMP/E installation and maintenance skills are a requirement. This person will play a key role in an upcoming OS/390 2.10 to z/OS 1.4 migration for a multi-LPAR environment. Excellent relocation package. [Q67045](#)

COMPUTERS

Senior DB2 DBA Multi-Platform Support

A Wisconsin end user has an attractive opening for a DB2 DBA who can provide support for both z/OS and RS/6000 platforms. Qualified applicants will have a strong DB2 DBA background (5+ years) with additional experience in DB2-related performance/tuning and UDB DB2 on distributed servers. DB2 systems programming is a plus. Salary commensurate with experience. [K45702](#)

COMPUTERS

DB2 Internals Senior Product Developer

A leading software vendor has an immediate need for a senior system software developer to provide new design and development of a DB2-oriented product. All applicants must have strong DB2 control block level internals, 390/assembler, OS/390 internals, and demonstrated product development skills in a vendor environment. Experience with C/C++ coding or IMS internals is highly desirable. Salary commensurate with experience. Stock options and company-paid relocation. [C19397](#)

Nationwide Staffing for Fulltime and Contract Systems Management Professionals

SPCI is a national high-tech Search and Consulting firm specializing in the Mainframe and Unix Systems Programming fields. This includes expertise such as MVS, OS/390, z/OS, Unix, VM, VSE, VTAM, TCP/IP, CICS, MQSeries, DB2, IMS, UDB, Adabas, Oracle, and Sybase.

Areas of expertise include:

- ◆ Systems Programming
- ◆ Systems Administration
- ◆ Capacity Planning
- ◆ Performance and Tuning
- ◆ Enterprise Network Administration
- ◆ Storage Management
- ◆ Security Administration
- ◆ Database Management
- ◆ Enterprise Architecture
- ◆ Disaster Recovery
- ◆ Technical Management

Because SPCI is the only recruiting firm in the United States dealing exclusively with mainframe and UNIX systems programmers, we are better equipped than a generic recruiter to meet the individual needs of our applicants and clients.

www.SPCI.net

Joe Gallaher is the president and founder of SPCI. Since 1982, Joe and his staff have been considered the premier source for finding and qualifying talent in all mainframe MVS and Unix systems-related areas.

A longtime Washington D.C. resident, Joe now splits time between SPCI's East and West coast offices. During his recruiting career, which has spanned over 20 years, Joe has placed almost 1,000 IBM systems programmers and system-level product developers, making him the leading recruiter in the world for this search specialty. Prior to establishing SPCI he worked as a programmer, computer analyst, and technical writer for various East coast high-tech firms.

Joe has been a regular attendee of the Mid-Atlantic CICS Users Group since 1984 and has served on the steering committee of the NaSPA Capital Area MVS Users Group. He has also attended numerous SHARE and CMG conferences.

“We are all former technicians at SPCI. Our philosophy is that it is better to use our technical knowledge to find you the right person than to use sales skills to sell you someone who is not.”

Joe graduated from Lafayette College in 1979 where he received a Bachelor of Arts degree in English with a minor in Civil Engineering. Additionally, he has taken classes in Local and Wide Area Networking (Johns Hopkins University), MVS Internals (ACTS Corporation), Assembly Language Coding (Montgomery College), JAVA Programming (UCLA), and Visual FoxPro (MEI). Joe has also completed both graduate and undergraduate level coursework at Georgetown University, University of Florida, and USC.

When he is not recruiting, Joe serves as SPCI's network administrator, Visual FoxPro programmer, webmaster, and newsletter editor.
